                                     This sequence is a humanised variant version of the murine COL1 VK chain, designated COL1NWVK, and was used to obtain the humanised antibody (Ab) of the invention. The humanised Ab, or its fragment, specifically binds to carcinoembryonic antigen (CEA). The Ab, optionally coupled to an effector or label, is used to treat or prevent CEA-expressing cancers (e.g. of breast, ovary, lung, stomach, or colon) and to detect cancers in vivo (particularly by tumour imaging to identify tumours and metastases before surgery), for diagnosis or prognosis. It is not anti-murine antibody or allergic response, or non-specific cytotoxicity, so can be administered repeatedly. It retains specificity for CEA, and has improved clearance (allowing efficient targeting) and metabolic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A new anti-idiotype antibody against a human anticancer monoconal antibody is claimed. This antibody contains in its heavy chain 3 complemetarity determining regions CDR1 (AARR4929-RR4931), CDR2 (AARR4932-RR4935), this is also true of the light chain which has its own CDR1 (AARR4944-RR4946 and AAR85774), CDR2 (AARR4947-R74949) and CDR3 (AAR74950-R74954). The antibody and DNA encoding it are useful in pharmacological, medical and blochemical
                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            L-CDR-1 of anti-idiotype antibody against human anticancer antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel anti-idiotype antibody against an human anticancer monoclonal antibody - and DNA sequences encoding the antibody, useful in pharmacology, medicine and biochemical fields.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Antibody; cancer; CDR; heavy chain; light chain; immunoglobulin; complementarity determining region.

Sequence

```
The present sequence represents the light chain of monoclonal antibody
RS-2BB, which is directed against the respiratory syncytial virus (RSV).
The specification describes peptides which recognise, by
antigen-antibody type reactions, at least 1 epitope of a pathogenic virus
to CDR regions of monoclonal antibodies specific for RSV ARAV0917-2B are
analogous to CDR regions of monoclonal antibodies specific for site III
or IV of the VP6 protein of rota virus (RV). The peptides can neutralise
viral infections and may also inhibit fusion between infected and
uninfected cells or cells and viruses. They provide passive or active
protection and/or inhibit transcription of the virus, so are useful as
antiviral agents or for prophylaxis, in human or veterinary medicine. The
peptides can be labelled and used to diagnose infection or contamination
by the virus. The peptides are particularly directed against RSV or RS
contamination and any also be used against papilloma, adeno, entero, polio, influenza

                                                                                                                                                                                                                                                 AAR74955-R74959 are possible light chains of a new anti-idiotype antibody against a human anticancer monoconal antibody. This antibody contains in its heavy chain 3 complemetarity determining regions CDR1 (AAR74929-R74931), CDR2 (AAR74932-R794935) and CDR3 (AAR74936-R74936) this is also true of the light chain which has its own CDR1 (AAR74944-R74946 and AAR85774), CDR2 (AAR74947-R74946) and CDR3 (AAR74956-R74954). The antibody and DNA encoding it are useful in pharmacological, medical and biochemical fields.
                                                                                                                                                                                                                                                                                                                                                                                     Gaps

AAR90829-39 are monoclonal antibodies or a binding fragments produced by using insect guts, partic. insect brush border membranes (BBMs), esp. corn rootworm, as antigen; immunising a donor animal with the antigen; isolating immunocompetent B cells from the immunised animal; fusing B cells with a tumour cell line; isolating the fused cells, culturing them and cloning positive hybrid cells; and screening the hybrid cells for
                                                                                                                                                                                                                                                                   AAR74955-R74959 are possible light chains of a new anti-idiotype antibody against a human anticancer monoconal antibody. This antibody contains in its heavy chain 3 complemetarity determining regions CDR1 (AAR74929-R74931), CDR2 (AAR74932-R794935) and CDR3 (AAR74959-R74931), CDR2 (AAR74932-R794935) and CDR3 (AAR74954-R74946 and AAR857741, CDR2 (AAR74947-R74949) and CDR3 (AAR74950-R74954). The antibody and DNA encoding it are useful in pharmacological, medical and biochemical fields.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New monoclonal antibodies which bind insect gut proteins - used partic. with toxin moieties for the control of insect pests, partic. in plants

prodn. of the required Mabs. The Mabs bind to the gut of a target insect but do not bind to mammalian BBMs. The DNA sequence can be operably linked to a toxin molety, esp. selected from e.g. Bacillus toxins, Pseudomonas exotoxin and phytolaccin, etc. The Abs are useful for control of insect pests, e.g. Coleoptera, Diptera, Hymenoptera and Lepidoptera. The pesticidal compsn. is pref. applied to a plant, e.g.

This is the light chain variable region of a monoclonal antibody (MAb)
340. The MAb 340 acts as a trophoblast binding agent in a method for
analysing human foetal calls. The method comprises isolating at least 2
types of nucleated feetal calls. The method comprises isolating at least 2
types of nucleated feetal calls. The method comprises isolated bells
c specifically are nucleated red calls (erythrocytes) and trophoblasts.

CC The trophoblasts are isolated by contacting the maternal sample with a
c specific binding agent that binds to the epidermal growth factor receptor
(EGFr). MAb340 or an EGFr binding derivative of MAb340 comprising at
cc least the CDR regions of one or other of the light or heavy chain
carled regions of MAb 340 is used as the binding agent. Erythrocytes
cc are also isolated with a specific anti-transferrin antibody. The target
cc nucleotide sequences in the foetal cells are amplified by PCR primers.
The isolated cells can be used for genetic and biochemical analysis,
cparticularly to determine the sex of the foetus or to detect inherited
abnormalities, e.g. Down's syndrome. More generally MAb 340 can be used
cc carcinoma cells, that express EGF receptor. The method is not
carcinoma cells, that express EGF receptor. The method is not
carcinoma cells, that express EGF receptor. The method is not
carcinoma cells, that express EGF receptor. The method is not
concrete the types of cells significantly improves the sensitivity of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Non-immunogenic; epitope; T-cell; immunogenicity; immune system; SK; immunoglobulin; therapeutic; streptokinase; de-immunised.

proteins. The method comprises determining at least part of the amino acid sequence of the protein; (b) identifying in the amino acid sequence on or more potential epitopes for T-cells (T-cell epitopes) of the given species; and (c) modifying the amino acid sequence to eliminate at least one of the T-cell epitopes identified in step (b) thereby to eliminate or reduce the immunogenicity of the protein when exposed to the immunogenicity of the protein when exposed to the immunogenicity of the protein when exposed to the immuno to predict the basis for immunogenic responses is also provided. The methods can be used particularly for reducing the immunogenicity of immunoglobulins or therapeutic proteins, e.g. streptokinase (SK). The products can be used for diagnosis and therapy. The present sequence represents the protein sequence of de-immunised 340 Vh. invention relates to a method for the production of non-immunogenic

Sequence 2, Application US/08017570

Patent No. 5472693

GENERAL INFORMATION:

APPLICANT: GOTALE, BRIAN B

APPLICANT: RIXON, MARK W

APPLICANT: RAZAN, DONALD A

APPLICANT: RAZAN, DONALD A

APPLICANT: RAZAN, DONALD A

APPLICANT: MELSON

TITLE OF INVENTION: ANTIGEN CHIMERIC ANTIBODIES

NUMBER OF SEQUENCES: 24

CORRESPONDENCE ADDRESS: 24

CORRESPONDENCE ADDRESS: 24

CORRESPONDENCE ADDRESS: 32

CORRESPONDENCE ADDRESS: 32

COUNTRY: US

COUNTRY: US

COUNTRY: US

COMPUTER READABLE FORM:

MEDIAN TYPE: FLORPY disk

COMPUTER READABLE FORM:

MEDIAN TYPE: PLOPPY disk

COMPUTER READABLE FORM:

MEDIAN TYPE: PLOPPY disk

COMPUTER READABLE FORM:

MEDIAN TYPE: PLOPPY disk

COMPUTER READABLE FORM:

MEDIAN TYPE: ADDRESS: 34, 941

REPERENCE/DOCKET NUMBER: C.38, 777

TELECOMMUNICATION: UNDERFICE:

REGISTRATION INDRAMINION:

TELECOMMUNICATION OF 25

SEQUENCE CHARACTERISTICS:

LENGTH: 110 and mino acids

TOPOLOGY: linear

MOLECULE TYPE: PICOLE

Sequence 8, Application US/08765469

Patent No. 6069301

GENERAL INFORMATION:
APPLICANT: Carozzi, Nadine B.
APPLICANT: Carozzi, Nadine B.
APPLICANT: Koziel, Michael G.
TITLE OF INVENTION: Artibodies which Bind to Insect Gut
TITLE OF INVENTION: Proteins and their Use
NUMBER OF SEQUENCES: 49
CORRESPONDENCE ADDRESS:
ADDRESSEE: Ciba-Geigy Corporation
STREET: 7 Skyline Drive
CITY: Hawthorne
STRTE: NY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score 68; DB 3; Length 110;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A; Molecule type: protein
A; Residues: 1-111 <WEI>
A; Residues: 1-111 <WEI>
A; Note: the PC4285 and PC4039 sequences are identical
C; Complex: An immunoglobulin heterotetramer subunit consists of two identical light (hain disulfide bonds. In some cases, such as IgA and IgM, the subunits associate into C; Superfamily: immunoglobulin V region; immunoglobulin homology
C; Keywords: heterotetramer
Assidues: 1-111 (WEI)

"A novel type of limulus lectin-L6. Purification, primary structure, and antibacterial activity."
J. Biol. Chem. 270:14493-14499.
I- FUNCTION: LIPOPOLXSACCHARIDE-BINDING PROTEIN WITH GRAM-NEGATIVE ANTIBACTERIAL ACTIVITY. BINDS ZINC AND CALCIUM.
I- SUBCELLULAR LOCATION: L-GRANULES.
I- TISSUE SPECIFICITY: HEMOCYTES.
I- SIMILARITY: BELONGS TO THE TECTONIN FAMILY.
I- SIMILARITY: BELONGS TO THE TECTONIN FAMILY.

Humanised, semi-chimeric and chimeric antibodies against human high-affinity IgE receptor - useful medicinally and have low

```
This invention describes a novel method for the detection of a mammalian infection by an acid-resistant microorganism (A) by treating a faecal sample with at least two different monoclonal antibodies (MAD) for their fragments or derivatives) or acomplex (C) between (I) and the corresponding antigen of (A). The first and second (I) bind to epitopes of different antigens (Ag). These epitopes are present, after passage through the intestines, in at least some mammals, and have either: (I) their native structure; or (ii) a structure against which an antibody is produced by an animal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Detecting infection by acid-fast microbes for diagnosis of Helicobacter pylori, comprises reacting a faecal sample with two binding reagents for antigens that survive intestinal passage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Acid-resistant microorganism; detection; faecal; intestine; infection; monoclonal antibody; heat shock protein; HSP60; light chain; CDR; complementarity determining region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     H. pylori HSP60-binding antibody light chain CDR2 protein fragment.
                                                                                                                         The present complementarity determining region 2 (CDR2), which is from a murine, anti-human high affinity immunoglobulin E (1gE) receptor, monoclonal antibody (MAD) heavy chain variable region, can be used in the preparation of humanised or semi-chimeric anti-human high affinity IgE receptor MAD. The MAD can be used to treat or prevent diseases, specifically allergies, associated with the receptor. The humanised, semi-chimeric or chimeric MAD have very low antigenicity in humans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cullmann G, Friedrichs U, Heppner P, Lakner M;

infected or immunized with (A), or its extract, lysate, derived protein or fragment, or with a synthetic peptide. Practically all mammals display at least one of the specified epitopes. The method is used to detect infection by acid-fast bacteria, particularly of the genera Helicobacter, Mycobacterium and Campylobacter, specifically H. pylori, H. hepaticus, M. tuberculosis, C. jejuni and C. pylori. (I) may also be used therapeutically. The method is direct and non-invasive, and provides an inexpensive and easily standardizable diagnosis, despite possible degradation of antigens during passage through the intestines. This sequence represents a fragment of a H. pylori heat shock protein, HSP60-binding antibody light chain complementarity determining region CDRI which is used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present peptide binds the alpha-chain of the GM-CSF receptor, and can therefore be used in binding assays in place of GM-CSF. It can also be used as an antagonist, 1.e. in the treatment of inflammation or autoimmune diseases, or in the prodo. of GM-CSF agonists, i.e. upregulators for the prodo. of immune system cells. The peptide is derived from CDR II of the recombinant antibody light chain analogue of GM-CSF, 23.2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      identifying biologically active protein peptide mimics - by prepnof recombinant antibody libraries and synthesising complementary

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Total RNA was isolated from the hybridoma cell line 23F2G and first strand cDNA was synthesised using the total RNA as a template. The first strand cDNA was used as a template for PCR to obtain double stranded DNA fragments encoding the variable regions of both the heavy and light chains of monoclonal antibody 23F2G. The sequence shown is that of the light chain variable region of MAD 23F2G The humanised form of MAD 23F2G may be administered to alleviate symptoms associated with inflammatory disease states, esp. for the inhibition of inflammatory processes associated with multiple sclerosis. The MAD blocks leukocyte adhesion and migration to inflammatory sites. The MAD is an anti-CD18 integrin sentibody which competes with MAD 60.3 for binding to LFA-1.

(ATCC HB 11801) and the Chinese hamster ovary (CHO) cell lines 6E6 (ATCC CRL 11398) and B13-24 (ATCC CRL 11397). Monoclonal antibody (MAD) 23F2G (and its humanised variants 6E6 and B13-24) is an anti-human CD18 antibody for the treatment of inflammation, specifically multiple sclerosis. The present sequence is mouse 23F2G light chain variable region from the present invention.
                                                                                                                                                                                                                                  Mouse; humanised; antibody; heavy chain variable region; light chain; 23F2G; inflammatory disease; multiple sclerosis; common beta chain; CD18; human leukocyte integrin.

                                                                                                                                                                                                                                                                     The cDNA encoding the present sequence, the light chain variable region of the human antibody (Ab) CRA2, was used in the preparation of a humanised or semi-chimeric monoclonal Ab (MAb), comprising complementarity determining regions (CDR) from a murine, anti-human high affinity immunoglobulin E (IgE) receptor, MAb. The humanised, semi-chimeric or chimeric MAb can be used to treat or prevent diseases, specifically allergies, associated with the receptor, and has very low antigenicity in humans.

This sequence is the VL chain of an anti-CD40 monoclonal antibody used in the construction of an inducer of the invention.

The inducer is for the production of an antigen-specific antibody with high avidity, consists of a chimeric molecule containing the antigen together with a B-cell activating signal. The inducer is a chimeric molecule containing: (1) an antigen portion recognised by a B-cell antigen receptor; and (2) a signal transmitter portion, such as anti-CD40 antigen receptor; and (2) a signal transmitter portion, such as anti-CD40 antigen-specific antibody. The inducer may be incorporated into a vaccine for prevention and treatment of infectious diseases including HIV, and used to produce antigen-specific monoclonal antibodies for the treatment, diagnosis and investigation of diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                     Inducer for production of antigen-specific antibody of high avidity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Antibody; humanised antibody; variable region; immune response; cytomegalovirus; glycoprotein; complementarity determining region; CDR; heavy chain; light chain; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New humanised monoclonal antibodies against Human Cytomegalovirus - contain murine CDR and human framework modified to increase specificity or affinity, for treatment or prevention of HCMV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ó

Human monoclonal antibodies may be made specific for a pathogen by susbtituting the complementarity determining regions (CDR's) from the murine antibody variable domains which show desirable binding properties to that pathogen, into the human immunoglobulin heavy and light chain variable domains. These "humanised" antibodies should elicit a considerably reduced immune response in humans compared to chimeric antibodies as they contain considerably less murine components and their half life in the circulariby abould approach that of natural human antibodies. This sequence is taken from a donor monoclonal antibody HCMV16, specific for the human cytomegalovirus gH glycoprotein from which CDR's were taken to construct humanised antibodies. Humanised antibodies are described in AAQ63902-063908.

N-PSDB; AAQ71286.

Vector for secretion of single chain antibody from Bacillus subtilis - conty. neutral protease promoter and specific leader sequence, providing high yield of soluble antibody for diagnostic therapeutic use

Example 3; Figure 2; 27pp; English.

The sequence encoding the variable region of the light chain of the monoclonal antibody 5E8 (specific for the alpha subunit of human gonadotrophin) was amplified for its use in a recombinant vector which also comprised (1) the promoter of the gene for the neutral protease of Bacillus subtlins BGSC 1A341, (2) the secretion sequence described in AAQ71278. The amplified fragment was used to produce a DNA sequence encoding an antibody in single molecule form with the sequence VH/VK-L-VK/VH-(TAG)n, where VH and VK are the variable regions of the heavy and light chains of the antibody and L is the linker of sequence Val-Ser-Ser-(G1Y(4)-Ser)3, TAG is a peptide incomplised by polyclonal antibodies directed towards the same peptide, is 10 of The vector is used for the production of single chain antibodies which have improved pharmacokinetic properties and can be produced more economically than monoclonal antibodies. The vector callows production of antibodies in completely soluble form with

Varicella zoster virus gpIII antibody with humanised variable region - for treatment, prevention or diagnosis of varicella zoster virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 respectively. The framework may include at least one mutation that improves binding specificity or affinity. The heavy and light chain variable regions are preferably (VZVHu-VH, -VHKRIIS, -VHTLY, -VHKVRSE or -VHS) and VZVHuVK respectively.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Antibodies (Ab) comprising a humanised variable region specifically binding to a varicella zoster virus (VZV) can be used to treat or prevent VZV infection. They may optionally be attached to a therapeutic agent. They may also be used, when labelled, to detect NZV particles and infected cells in blood; for the removal neutralisation of infectious VZV in blood; for the selection/isolation of human monoclonal Abs and for the design of (non-peptide mimetics with similar diagnostic and therapeutic uses. The variable region CDR portion is derived from murine Ab 206 and the heavy and light chain variable region frameworks are NEWM and REI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       100.0%; Score 31; DB 17; Length 111; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes the hybridoma cell line 23F2G (ATCC HB 11801) and the Chinese hamster covary (CHO) cell lines 6E6 (ATCC CRL 11399) and B13-24 (ATCC CRL 11397). Monoclonal antibody (MAD) 23F2G (and its humanised variants 6E6 and B13-24) is an anti-human CD18 antibody for the treatment of inflammation, specifically multiple sclerosis. The present sequence represents humanised 23F2G light chain variable region from the present invention.
                                                                                                                                                                                                                        Mouse; humanised; antibody; heavy chain variable region; light chain; 23F2G; inflammatory disease; multiple sclerosis; common beta chain; CD18; human leukocyte integrin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Hybridomas that secrete anti-CDI8 antibody - useful for treating inflammation specifically multiple sclerosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

This invention describes a novel method for the detection of a mammalian infection by an acid-resistant microorganism (A) by treating a faecal sample with at least two different monoclonal antibodies (MAD) (or their cample with at least two different monoclonal antibodies (MAD) (or their cragments or derivatives) or aptamers (collectively (I)) and detecting formation of a complex (C) between (I) and the corresponding antigen of (A). The first and second (I) bind to epitopes of different antigens (A). These epitopes are present, after passage through the intestines, in at least some mammals, and have either: (i) their native structure; or (ii) a structure against which an antibody is produced by an animal infection of with a synthetic peptide. Practically all mammals display at least one of the specified epitopes. The method is used to detect infection by acid-fast bacteria, particularly of the genera Helicobacter, Mycobacteriun and Campylobacter, specifically H. Pylori, H. hepaticus, M. tuberculosis, C. jejuni and C. pylori. (I) may also be used therapeutically. The method is direct and non-invasive, and provides an inexpensive and easily standardizable diagnosis, despite possible sequence represents the H. Pylori hast shock protein, HSPGO-binding antibut (A) and the standardizable diagnosis, despite the method is a conting passage through the intestines. This sequence represents the H. Pylori hast shock protein, HSPGO-binding and the diagnosis and provides and p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Detecting infection by acid-fast microbes for diagnosis of Helicobacter pylori, comprises reacting a faecal sample with two binding reagents for antigens that survive intestinal passage
Acid-resistant microorganism; detection; faecal; intestine; infection; monoclonal antikody; heat shock protein; HSP60; light chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

This sequence is encoded by recombinant DNA contained in vector PTZK910. This is ligated to a DNA sequence encoding a human light (L) chain constant (C) region, in the construction of pG9.2.72K. This vector is used to transform host cells, in conjunction with vector pN9.2.27G1 contg. murine heavy (H) chain variable (V) region and human heavy chain C region. The resulting host cell expresses the chimeric antibody 9.2.27 which is directed against proteoglycans of human melanoma cells. This chimeric monoclonal antibody (MAD) is useful in the diagnosis and treatment of melanoma. The use of human C-regions avoids the problems associated with murine monoclonals e.g. see also AAQ10380-84.

Sequence 11, Application US/08275053
Patent No. 5607847
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: Virus antibody.
TITLE OF INVENTION: Virus antibody.
NUMBER OF SEQUENCES: 16
COMPUTER READABLE FORM:
MEDIUM YFPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 90.3%; Score 28; DB 1; Length 111;

US-08-275-053-14

Sequence 14, Application US/08275053

Patent No. 5607847

GENERAL INFORMATION:
APPLICANT:
TITLE OF INVENTION: Virus antibody.
TITLE OF INVENTION: Virus antibody.
TITLE OF INVENTION: Virus antibody.
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.25 (EPO)
APPLICATION NUMBER: US/08/275,053
PRIOR APPLICATION DATA:
APPLICATION NUMBER: PCT/GB93/01798
INFORMATION FOR SEQ ID NO: 14:
SEQUENCE CHARACTERISTICS:
LENGTH: 111 amino acids
TYPE: amino acids
TYPE: amino acids
TYPE: amino acids
TYPE: ADSOLUTE TOWN NUMBER: DESCOURCE TYPE: TOPPOLOGY: Innear
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0; Gaps

A; Title: Application of (13)C NMR spectroscopy to paratope mapping for larger antigen A; Reference number: 845714; MUID:94283606
A; Status: nucleic acid sequence not shown; not compared with conceptual translation A; Molecule type: DNA
A; Reperimental source: cell line Ex-3C7
C; Superfamily: Immunoglobulin V region; immunoglobulin homology
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        KVWMS84

Ig kappa chain V region (PC6684) - mouse (tentative sequence)

C; Species: was musculus (house mouse)

C; Species: was musculus (house mouse)

C; Accession: A01938

R; Weigert, M: Gatmaitan, L.; Loh, E.; Schilling, J.; Hood, L.

Nature 276, 785-790, 1978

A; Reference number: A93204; MUID: 79073152

A; Recence number: A93204; MUID: 79073152

C; Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kappent disulfide bonds: In some cases, such as IgA and IgM, the subunits associate into lace subunits immunoglobulin V region; immunoglobulin homology

C; Keywords: heterotetramer
